syndrome in a population at high risk of cardiovascular disease.

MicroRNA-410 regulated lipoprotein lipase variant rs13702 is associated with stroke incidence and modulated by diet in the randomized controlled PREDIMED trial.

Novel association of the obesity risk-allele near Fas Apoptotic Inhibitory Molecule 2 (FAIM2) gene with heart rate and study of its effects on myocardial infarction in diabetic participants of the PREDIMED trial.

Reduced circulating sTWEAK levels are associated with metabolic syndrome in elderly individuals at high cardiovascular risk.

Mediterranean diet reduces 24-hour ambulatory blood pressure, blood glucose, and lipids: one-year randomized, clinical trial.
Hypertension. 2014;64:69-76.

Effect of the Mediterranean diet on heart failure biomarkers: a randomized sample from the PREDIMED trial.

Oxidative stress is associated with an increased antioxidant defense in elderly subjects: a multilevel approach.

Novel multimetabolite prediction of walnut consumption by a urinary biomarker model in a free-living population: the PREDIMED study.

Mediterranean diet and heart rate: the PREDIMED randomised trial.

Dietary magnesium intake is inversely associated with mortality in adults at high cardiovascular disease risk.

Olive oil intake and risk of cardiovascular disease and mortality in the PREDIMED Study.

Dietary intake of vitamin K is inversely associated with mortality risk.

Olive oil consumption and risk of CHD and/or stroke: a meta-analysis of case-control, cohort and intervention studies.

Prevention of diabetes with Mediterranean diets.

Obesity indexes and total mortality among elderly subjects at high cardiovascular risk: the PREDIMED study.

A provegetarian food pattern and reduction in total mortality in the Prevención con Dieta Mediterránea (PREDIMED) study.
Am J Clin Nutr. 2014;100(Supplement 1):320S-328S.

Extravirgin olive oil consumption reduces risk of atrial fibrillation: the PREDIMED (Prevención con Dieta Mediterránea) trial.

Genotype patterns at CLU, CR1, PICALM and APOE, cognition and Mediterranean diet: the PREDIMED-NAVARRA trial.

Mediterranean diet and cardiovascular health: Teachings of the PREDIMED study.
Adv Nutr. 2014;5:3305-6S.

Association of Mediterranean diet with peripheral artery disease: the PREDIMED randomized trial.

Changes in ultrasound-assessed carotid intima-media thickness and plaque with a Mediterranean diet: a substudy of the PREDIMED trial.

Prevention of diabetes with Mediterranean diets: a subgroup analysis of a randomized trial.

Baseline Adherence to the Mediterranean Diet and Major Cardiovascular Events: Prevención con Dieta Mediterránea Trial.

Inverse association between habitual polyphenol intake and incidence of cardiovascular events in the PREDIMED study.

Polyphenol intake and mortality risk: a re-analysis of the PREDIMED trial.

2013

How to publish in The New England Journal of Medicine and not to die while trying it; the PREDIMED experience.
White blood cell counts as risk markers of developing metabolic syndrome and its components in the
Predimed study.
Changes in bread consumption and 4-year changes in adiposity in 2 Spanish subjects at high cardiovascular risk.
Dietary glycemic index/load and peripheral adipokines and inflammatory markers in elderly subjects at high cardiovascular risk.
In vivo transcriptomic profile after a Mediterranean diet in high-cardiovascular risk patients: a randomized controlled trial.
Mediterranean diet supplemented with nuts reduces waist circumference and shifts lipoprotein subfractions to a less atherogenic pattern in subjects at high cardiovascular risk.

A 14-Item Mediterranean Diet Assessment Tool and Obesity Indexes among High-Risk Subjects: The PREDIMED Trial.
Associations of the FTO rs9939609 and the MC4R rs17782313 polymorphisms with type 2 diabetes are modulated by diet, being higher when adherence to the Mediterranean diet pattern is low.
The Mediterranean diet pattern and its main components are associated with lower plasma concentrations of tumor necrosis factor receptor 60 in patients at high risk for cardiovascular disease.
Virgin olive oil and nuts as key foods of the Mediterranean diet effects on inflammatory biomarkers related to atherosclerosis.
Polyphenol-rich foods in the Mediterranean diet are associated with better cognitive function in elderly subjects at high cardiovascular risk.
High urinary levels of resveratrol metabolites are associated with a reduction in the prevalence of cardiovascular risk factors in high-risk patients.

2009

assessment in the PREDIMED study.
Mediterranean diet and high dietary acid load associated with mixed nuts: effect on bone metabolism in elderly subjects.
Polymorphisms cyclooxygenase-2 -765G>C and interleukin-6 -174G>C are associated with serum inflammation markers in a high cardiovascular risk population and do not modify the response to a Mediterranean diet supplemented with virgin olive oil or nuts.
Serum sterol responses to increasing plant sterol intake from natural foods in the Mediterranean diet.
Effects of dietary fibre intake on risk factors for cardiovascular disease in subjects at high risk.
Mediterranean food pattern and the primary prevention of chronic disease: recent developments.
Hypertensive status and lipoprotein oxidation in an elderly population at high cardiovascular risk.
Mediterranean food pattern and the primary prevention of chronic disease: recent developments.
Rapid Folin-Ciocalteu method using microtiter 96-well plate cartridges for solid phase extraction to assess urinary total phenolic compounds, as a biomarker of total polyphenols intake.
Inhibition of circulating immune cell activation: a molecular antiinflammatory effect of the Mediterranean diet.
A 3 years follow-up of a Mediterranean diet rich in virgin olive oil is associated with high plasma antioxidant capacity and reduced body weight gain.
The Mediterranean diet protects against waist circumference enlargement in 12Ala carriers for the PPARgamma gene: 2 years’ follow-up of 774 subjects at high cardiovascular risk.
Alcohol consumption is associated with high concentrations of urinary hydroxytyrosol.
Low-fat dairy products and blood pressure: follow-up of 2290 older persons at high cardiovascular risk participating in the PREDIMED study.
Resveratrol metabolites in urine as biomarker of wine intake in free-living subjects: The PREDIMED Study.
